Problem Statements on Agentic AI

22. Problem Statement – Interview Trainer Agent

Job seekers often struggle to prepare for interviews because they need to search multiple resources for technical, HR, and behavioural questions. The objective of this project is to build an AI-powered Interview Trainer Agent that generates personalized interview preparation material based on a user's job role, experience, and skills.

The solution uses IBM watsonx Orchestrate, watsonx.ai, IBM Cloud, and Retrieval Augmented Generation (RAG) to provide accurate and context-aware interview guidance.

The Objective: -

Develop an AI agent that generates personalized interview preparation material based on:

- Job Role
- Experience
- Skills
